Best way to drive one prop w 2 engines

If I wanted to drive one propeller with two engines what would be the best way? Two centrifugal clutches, two PSRUs to the propeller or what?
Norm P.
Two cog belt drives.
Paul Lamar

Two cog belt drives with a suitable sprague clutch in the engine shaft.
John Burey

Dear Paul,
you know, the Wankel GmbH does not exist any longer since 1991/1992 and Wankel Rotary GmbH was going in bankruptcy in 2001.
WANKEL AG is working with the TWINPACK again (Helicopter).
Best regards ...
Mario
